

- Digifuse Critter Medallion Seek & Find Panel
 - Cognitive development
 - Cause and effect challenge with 6 seek and find medallions riveted throughout the play equipment
 - Creative stimulation
 - Gross and fine motor skill development
- Help find each critter by identifying them on the panel and seeking to find them on the play features
- Learn about science and nature with the anatomy of a bee local to the Northeast

- **Ring-a-bell Panel Feature**
 - Cognitive development with fine and gross motor skill definition
 - Cause and effect challenge by using the music note plunger to create music against the bell
 - Creative stimulation and development through auditory stimulation
 - Textural differences create a sensorial play event
- **Leaf pod climber with rail leaf slide manipulative feature**
 - Build balance, coordination, early climbing and navigation skills as you develop cross body motor functioning skills at 3 different pedestal levels with varying textures on their surface
- **A single slide** on this slide offers the singular experience for the early user to begin understanding the momentary loss of control that allows a slide to be fun in the first place

- Leaf ball marble panel
 - Cognitive development with fine and gross motor skill definition as each marble moves and has an iridescent color so brings a visually stimulating experience at ground level
- Climbing wall and play counter
 - Connected to the double slide platform is a play counter with mixed climbing panel utilizing different size foot and hand holds for a graduated challenge climbing experience
 - Role playing and creative experiential play through the play counter also allowing under deck play and creating a cozy place kids can hang out and feel like they are under the treehouse creating an imaginative world of their own
- **The double slide** offers parallel or side by side play that brings in challenge and competition which are natural and necessary to child development
- **Acorn seats** provide a respite for running children or even adults using a manufacturing process to create a sensory play experience and connection to nature and creating an imaginative world where acorns are so big you can sit in them. Imaginative and sensory play piece.
- **Center platform catwalk** introduces a leaf slider as you walk from treehouse platform to the next treehouse platform to bring in more motor skill development and discovery. Hiding small features for children is fundamental to development and discovery within the cognitive and creative realm.
- **Transfer and belt climber** to access the lower platform uses spacing developed for an average child's body size and proprioceptive spacing that helps early crawlers and walkers develop their arm and leg coordination while utilizing a textural surfacing detail that brings a sensory experience to the user. On the way in you can find one of the medallions to begin your seek and find journey.

- **Mini Summit Climber**

- A child's first rock climbing experience but with softer features and spacing made for their developing bodies
- Grip and textural differences bring in a sensory play while ascending the mini summit
- Access from multiple angles and sides gives a different play experience
- Access can be made from a pod climber
- Spacing of leaf pods, pod climber, and mini summit are staggered to challenge reach and balance and help the user build core strength and coordination
- Find another medallion on your climbing experience and challenge yourself to let go of the mini summit and reach for the creature medallion when you feel ready

- **Material Choices**

- Various material choices, manufacturing processes, textures, and imagination eliciting elements such as the flower toppers make this a treehouse paradise for little children and users
- Imaginative play is one of the most needed and used types of play at younger ages and this treehouse plays into developing those strengths as cores to proper overall child development and learning respect for the world around you
