

Plant Materials Guide for Lexington MA

2011 Edition

This plant materials list was compiled for the Town of Lexington and its residents as a guide for municipal, commercial and residential landscaping purposes, for the incorporation of plant species predominantly native to Middlesex County. The purpose of this guide is two-fold; to provide its readers with a list of native plants suitable for landscaping purposes as well as a list of the most common invasive plant species found in the Lexington community.

The selection of non-native plant species for residential and commercial landscaping purposes along with the growing proliferation of invasive and non-native species not only in Lexington but nationally, has led to an accelerating decline in our native flora and fauna. Choosing native plant species for landscaping purposes, and removing invasive species wherever possible, can counter the decline of native plants.

This guide consists of three parts, a list of invasive species (Prevalent Invasive Species), a list of native species (Recommended Plant Materials List), and a list of area and regional nurseries that specialize in native plant species. For those wishing for photo references a good on-line source is Google Images, which also provides access to more detailed information for most species.

The creation of this guide was a collaborative effort by representatives of Citizens for Lexington Conservation, the Lexington Tree Committee and the Lexington Conservation Commission.

Prevalent Invasive Species List

For purposes of this guide, invasive plants are considered to be non-indigenous species that spread into various habitats causing an adverse environmental impact. Invasive plants in Lexington are found throughout the town on both public and private property, and are displacing native plants.

The species on this list tend to be those most prevalent in Lexington. These include trees (Norway maple, tree of heaven), shrubs (burning bush, barberry species), vines that kill trees (oriental bittersweet, English ivy), and herbaceous species (purple loosestrife, garlic mustard, common reed). Some of these invasive plants have been commonly used in residential and commercial landscaping and some of them are still available commercially. The listed plants should be removed where possible and should never be planted anew.

<i>Acer platanoides</i>	Norway Maple
<i>Acer pseudoplatanus</i>	Sycamore Maple
<i>Ailanthus altissima</i>	Tree of Heaven
<i>Alliaria petiolata</i>	Garlic Mustard
<i>Ampelopsis brevipedunculata</i>	Porcelainberry
<i>Berberis thunbergii</i>	Japanese Barberry
<i>Berberis vulgaris</i>	Common or European Barberry
<i>Celastrus orbiculatus</i>	Oriental Bittersweet
<i>Cynanchum louiseae</i>	Black Swallow-wort

<i>Euonymus alatus</i>	Burning Bush
<i>Hedera helix*</i>	English Ivy
<i>Ligustrum obtusifolium</i>	Border Privet
<i>Lonicera sp.</i>	All shrub species of Honeysuckles
<i>Lythrum salicaria</i>	Purple Loosestrife
<i>Phragmites australis</i>	Common Reed
<i>Pyrus calleryana*</i>	Callery or Bradford Pear
<i>Fallopia japonica or Polygonum cuspidatum</i>	Japanese Knotweed
<i>Rhamnus cathartica</i>	Common Buckthorn
<i>Rhamnus frangula*</i>	Glossy Buckthorn
<i>Rosa multiflora</i>	Multiflora Rose

(Species noted with an * are not included on the Massachusetts Prohibited Plant List but are considered to be prevalent and of concern in Lexington. For a more extensive listing of exotic species considered to be invasive in Massachusetts, please consult the Massachusetts Prohibited Plant List:

(http://www.mass.gov/agr/farmproducts/proposed_prohibited_plant_list_v12-12-05.htm).

As of January 1, 2009, Massachusetts has prohibited the sale, trade, purchase, and distribution of species so listed.)

Recommended Plant Materials List

Following is a comprehensive list of plant species native to Middlesex County, Massachusetts that are beneficial to the environment and to native fauna. The primary source for this list was The Vascular Plants of MA: A County Checklist published by the MA Division of Fisheries and Wildlife, (1999 ed). The variety of plants listed should enable landscapers to identify native plants that are similar to many popular non-native plant species in common use. For example, the list provides many native groundcovers that can replace aggressive groundcovers like English ivy, Japanese pachysandra, periwinkle, or bugleweed. In the realm of flowering shrubs, there are native species of viburnums, dogwoods, azaleas, and many others. Many are relatively easy to buy due to the growing interest in native plants.

Endangered, threatened, or species of concern are noted with an (*) per a list prepared by the MA Division of Fisheries and Wildlife (2005 edition). These may be particularly valuable to plant and are available in many garden centers. Extensive photo and factual information on each species may be found on-line at Google Images.
